Summary

Software Engineer & Data Scientist with **5+ years** building scalable backend services in Python and NodeJS on **AWS**, specializing in **Fintech** and **Real Estate**. Founder of **QuantCoder**, a quantitative crypto-trading platform powered by machine learning. Certified in Data Science and Machine Learning by **MIT** and **UNAM**. I bridge robust software engineering and applied machine learning to build and deploy high-impact, data-driven products, with a strong interest in algorithmic trading and quantitative research.

Professional Experience

QuantCoder — Founder & Owner

2023 – Present

Remote

Quantitative crypto-trading platform • quantcoderpro.com

- Founded and built end-to-end a platform that analyzes 15+ crypto pairs (BTC, ETH, SOL, XRP, ADA, DOT...) with machine-learning models trained on Binance data across multiple timeframes (4h / 1d / 1w / 1M), generating real-time **LONG** / **SHORT** / **SIDEWAYS** signals.
- Automated technical-analysis charts published to Facebook and X on trend changes, plus personalized Telegram alerts to subscribers.
- Web dashboard with live signals, interactive per-pair charts, GPT-4 analysis, a daily Spanish financial-news feed, and Stripe subscriptions.
- 100% serverless on AWS (Lambda, DynamoDB, Step Functions, S3, CloudFront) with clean architecture and custom Random Forest & K-Means classifiers.

Konfio — Software Developer (Finance)

2024 – Present

Mexico City

Backend engineering for banking products

- Build backend services in Python and NodeJS on AWS supporting data-intensive financial products.

GBM — Software Developer (Finance)

2022 – 2024

Mexico City

Trading and investment platforms

- Developed services in Python, NodeJS and C# for trading and investment platforms.
- Integrated market data and time series into APIs used by internal tools and dashboards.

TuHabi — Software Developer (Real Estate)

2021 – 2022

Mexico City

PropTech backend services

- Implemented backend services in Python (Django) and NodeJS on AWS using large real-estate datasets.

Codster — Software Developer (Consulting)

2019 – 2021

Mexico City

Custom software for multiple clients

- Delivered custom backend solutions in Python, Django, Flask and NodeJS for various clients.

Selected Projects

Binance Swing Trading Bot

2021

Foundation of QuantCoder • Python, ML, AWS

- Algorithmic trading bot for Binance in Python (NumPy, Scikit-learn, PyTorch, TensorFlow), deployed

on AWS.

- Experimented with K-Means, neural networks, Random Forest and XGBoost for pattern detection and signal generation.

WSEN Latina — **Scientific Network Website**

2018

wsen-latina.unam.mx · *UNAM*

- Scientific network website built with PHP, Apache and JavaScript.

Skills

Programming: Python, JavaScript, C#, SQL

Data Science / ML: NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow, XGBoost, Matplotlib / Seaborn

Backend & Cloud: Django, Flask, Serverless, React, AWS (Lambda, API Gateway, S3, RDS, DynamoDB), PostgreSQL, MySQL, MongoDB, Docker

Topics: Data cleaning, exploratory data analysis, probability & statistics, supervised & unsupervised learning, optimization in ML, communication of results

Education

B.Eng. in Computer Systems

2019

Instituto de Estudios Universitarios (IEU)

B.Sc. in Earth Sciences (Space Sciences)

2018

Universidad Nacional Autónoma de México (UNAM)

Certifications in Data Science

Data Science and Machine Learning: Making Data-Driven Decisions

2024

MIT Schwarzman College of Computing

Analytical Introduction to Data Science (Diploma)

2025

UNAM — Faculty of Sciences, Continuing Education
